SUBJECT: Medical INFO-March 21: Bioptron Hyperlight Therapy and its effectivity in acne

Dear colleagues,

Acne is estimated to affect 9.4% of the global population, making it the eighth most prevalent disease worldwide. The problem is exacerbated with the COVID and the wearing of protective face masks. Face masks create hot, humid environment – perfect for the proliferation of acne-causing bacteria (*Propionibacterium acnes*), *Staphylococcus aureus*, and fungi. Therefore, the use of masks provokes the appearance of pimples and redness, even in people who do not have acne currently. We are pleased to share with you two testimonials on the successful use of Bioptron Hyperlight System in acne treatment.

If you have recently received reports of completed research or testimonials from your country, please send them to me, so they can be archived and shared with other Zepter countries and their customers.

For more information, please feel free to contact me.

Best wishes and take care of yourselves,

Ms. Denise HELBLING

Biopton Hyperlight Therapy and Its effectiveness in treating acne

Biopton Hyperlight Therapy has proven its **beneficial effects in various skin conditions, including acne**. Two current cases from Romania, where the patients suffered from severe cases of acne, were treated with Biopton. By using Biopton Hyperlight Therapy once a day for 15 min during 3 weeks, the acne conditions of the two patients improved magnificently.

Case I

Before starting the treatment, the patient's skin was reddish with a high density of red pimples (Image 1A). The area affected reaches from the ear until the eyebrows and on the whole area of the cheek.

After treatment with Biopton Hyperlight Therapy for 3 weeks, 10 minutes/day, the **number of red pustules decreased drastically** (Image 1B). Not only was the **number of pustules reduced, but also the skin was not red anymore and it became smoother**.

Before treatment

After treatment (3 weeks, daily)

Case II

The patient had a **high number of red pimples**, especially in the area of the chin (Image 2A). Biopton Hyperlight Therapy was used during three weeks, 10 minutes/day. Thanks to the treatment, the **number of pimples was significantly reduced** and the few pimples that remained were smaller (Image 2B) and more superficial. At the same time, the regenerated skin looked smoother. Marks and scars almost disappeared.

These two cases nicely show the beneficial **effect of Biopton in the treatment of acne**. Biopton Hyperlight Therapy system helps the skin to recover due to its **biostimulative** effects.

By stimulating **microcirculation and collagen production** and also due to its **anti-inflammatory effect**, Bioptron supports the regeneration of smooth and healthy skin.
